

Evolution of caring FOR patient to → WITH patient through Electronic Patient Reported Outcomes

Todd Eppich, RN, BSN, CMSRN, CNML

Executive Director, Cancer & Digestive Health Institute

Providence

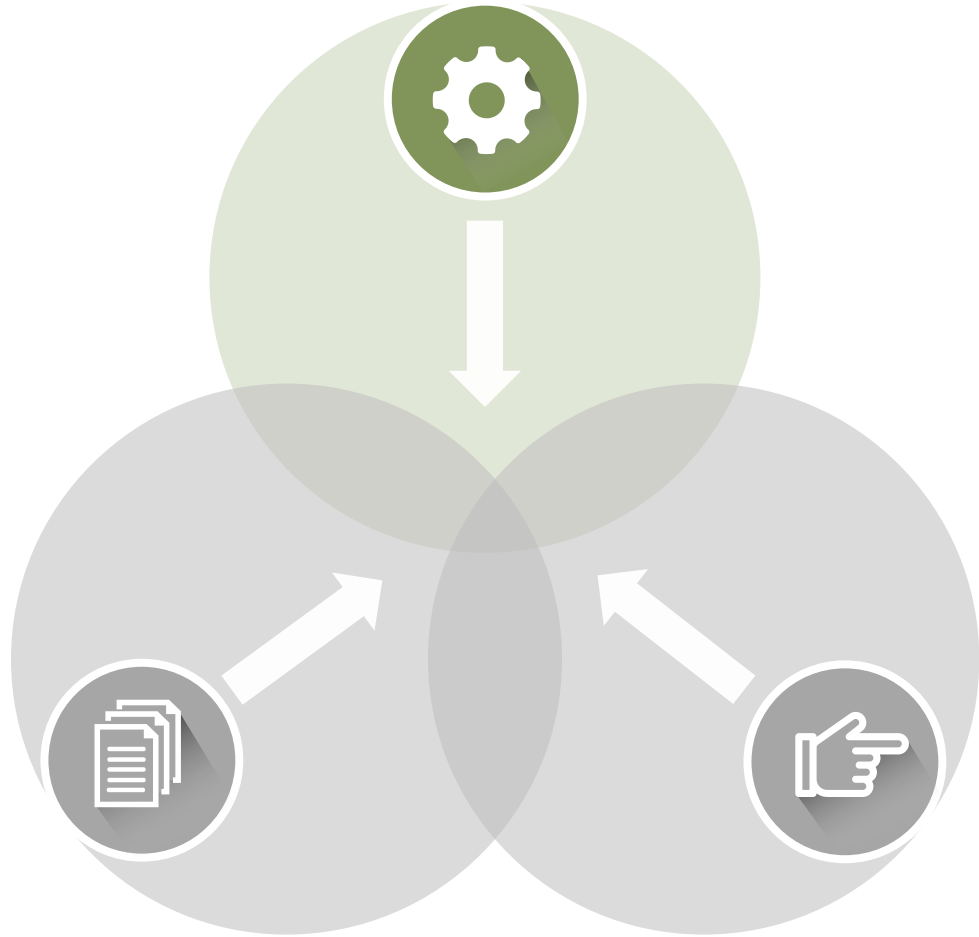

Providing Care FOR Patients

Healthcare delivery has historically been provided with the efficient mathematical approach

$$X + Y = Z$$

$$\text{Patient} + \text{Intervention/Care} = \text{Outcome}$$

Caring WITH the Patient

Increasing need to monitor patients

Electronic Patient Reported Outcomes
Remote Monitoring

Providence Oncology ePRO Journey

Continued Objectives WITH Patients

- Workflow design based upon PRO response to ensure needed interventions occur timely

Continued Objectives WITH Patients

- Workflow design based upon PRO response to ensure needed interventions occur timely
- ePRO APP prompts patient response to CTCAE questions specific to cancer care including frequency and severity three times each week

Continued Objectives WITH Patients

- Workflow design based upon PRO response to ensure needed interventions occur timely
- ePRO APP prompts patient response to CTCAE questions specific to cancer care including frequency and severity three times each week
- Provide predictive analytics for patient as they start treatment to:
 - Proactively identify needed interventions of care
 - Determine potential outcomes

Continued Objectives WITH Patients

- Workflow design based upon PRO response to ensure needed interventions occur timely
- ePRO APP prompts patient response to CTCAE questions specific to cancer care including frequency and severity three times each week
- Provide predictive analytics for patient as they start treatment to:
 - Proactively identify needed interventions of care
 - Determine potential outcomes

Ultimate GOAL: Provide care WITH the patient, at the right time, in the right place
