Conference Goals

To update hematologist/oncologists and their teams on issues affecting oncology practices in the USA and Puerto Rico. In addition this conference will advance the understanding of, and ultimately help to eliminate, the

disparities along the cancer continuum that represent a major public health problem. Reflecting this transdisciplinary field, professionals from academia, industry, government, and the community are brought together to promote the exchange of novel ideas, discuss the latest findings in the field, and stimulate the development of new research on health disparities. Our ultimate goal of this educational effort is to promote collaborations between leading cancer care disparities scientists in mainland USA and PR.
