

POLIVY™

polatuzumab vedotin-piiq

INJECTION FOR INTRAVENOUS USE 140MG

Sample Coding and Distribution Information

Indication Statement

POLIVY in combination with bendamustine and a rituximab product is indicated for the treatment of adult patients with relapsed or refractory diffuse large B-cell lymphoma (DLBCL), not otherwise specified, after at least 2 prior therapies.

Accelerated approval was granted for this indication based on complete response rate. Continued approval for this indication may be contingent upon verification and description of clinical benefit in a confirmatory trial.

Select Important Safety Information

Serious and sometimes fatal adverse reactions can occur with POLIVY treatment. Peripheral neuropathy, infusion-related reactions, myelosuppression, serious and opportunistic infections, progressive multifocal leukoencephalopathy (PML), tumor lysis syndrome, hepatotoxicity, and embryo-fetal toxicity can occur with POLIVY treatment.

Please see page 7 and full Prescribing information for additional important safety information.

Sample Diagnosis Codes for POLIVY

This coding information may assist you as you complete the payer forms for POLIVY.

Codes for your reference

ICD-10-CM Codes	
C83.30	Diffuse large B-cell lymphoma, unspecified site
C83.31	Diffuse large B-cell lymphoma, lymph nodes of head, face, and neck
C83.32	Diffuse large B-cell lymphoma, intrathoracic lymph nodes
C83.33	Diffuse large B-cell lymphoma, intra-abdominal lymph nodes
C83.34	Diffuse large B-cell lymphoma, lymph nodes of axilla and upper limb
C83.35	Diffuse large B-cell lymphoma, lymph nodes of inguinal region and lower limb
C83.36	Diffuse large B-cell lymphoma, intrapelvic lymph nodes
C83.37	Diffuse large B-cell lymphoma, spleen
C83.38	Diffuse large B-cell lymphoma, lymph nodes of multiple sites
C83.39	Diffuse large B-cell lymphoma, extranodal and solid organ sites

Additional Codes for POLIVY

Effective January 1, 2020, the Centers for Medicare & Medicaid Services (CMS) assigned a product-specific HCPCS code, or J-code, for POLIVY.

Codes for your reference

HCPCS Code	
J9309	Injection, polatuzumab vedotin-piiq, 1 mg
NDCs	
10-digit	50242-105-01
11-digit	50242-0105-01
Single-dose 20 mL vial that delivers 140 mg after reconstitution	
CPT Codes	
96413	Chemotherapy administration, intravenous infusion technique; up to 1 hour, single or initial substance/drug
96415	Chemotherapy administration, intravenous infusion technique; each additional hour (List separately in addition to code for primary procedure)

These codes are not all-inclusive; appropriate codes can vary by patient, setting of care and payer. Correct coding is the responsibility of the provider submitting the claim for the item or service. Please check with the payer to verify codes and special billing requirements. Genentech does not make any representation or guarantee concerning reimbursement or coverage for any service or item.

Many payers will not accept diagnostic codes that cite unspecified locations of disease. If you use an unspecified code, please check with your payer.

CPT=Current Procedural Terminology.

HCPCS=Healthcare Common Procedure Coding System.

ICD-10-CM=International Classification of Diseases, 10th Revision, Clinical Modification.

NDC=National Drug Code.

If your patient's health insurance plan has issued a denial, your BioOncology Field Reimbursement Manager (BFRM) or POLIVY Access Solutions Specialist can provide resources as you prepare an appeal submission, as per your patient's plan requirements. Considerations for composing an appeal letter and a sample appeal letter are available at [Genentech-Access.com/POLIVY](https://www.genentech.com/POLIVY).

Important Safety Information

Warnings and Precautions

Peripheral Neuropathy: Monitor patients for peripheral neuropathy and modify or discontinue dose accordingly.

Infusion-Related Reactions: Premedicate with an antihistamine and an antipyretic. Monitor patients closely during infusions. Interrupt or discontinue infusion if reactions occur.

Myelosuppression: Monitor complete blood counts. Manage using dose delays or reductions and growth factor support. Monitor for signs of infection.

Serious and Opportunistic Infections: Closely monitor patients for signs of bacterial, fungal, or viral infections.

Progressive Multifocal Leukoencephalopathy (PML): Monitor patients for new or worsening neurological, cognitive, or behavioral changes suggestive of PML.

Tumor Lysis Syndrome: Closely monitor patients with high tumor burden or rapidly proliferating tumors.

Hepatotoxicity: Monitor liver enzymes and bilirubin.

Embryo-Fetal Toxicity: Can cause fetal harm. Advise females of reproductive potential of the potential risk to a fetus and to use effective contraception during treatment and for 3 months after the last dose.

The Most Common Adverse Reactions

The most common adverse reactions ($\geq 20\%$) included neutropenia, thrombocytopenia, anemia, peripheral neuropathy, fatigue, diarrhea, pyrexia, decreased appetite, and pneumonia.

You may report side effects to the FDA at (800) FDA-1088 or www.fda.gov/medwatch.

You may also report side effects to Genentech at (888) 835-2555.

Please see the accompanying full Prescribing Information for additional Important Safety Information.
